A 10x10 grid of squares. The grid is composed of 10 columns and 10 rows. The squares are either white or black. The black squares form a complex, symmetrical pattern. The pattern is centered and consists of several interconnected shapes, including a large central cross-like structure and smaller, more intricate shapes at the corners and edges. The overall effect is a high-contrast, geometric design.

The following table shows the results of the analysis of variance for the effect of the concentration of the solution on the rate of reaction. The results are given in terms of the rate constant, k , and the order of reaction, n . The rate constant, k , is determined from the slope of the line in the plot of $\log k$ versus $\log C$. The order of reaction, n , is determined from the slope of the line in the plot of $\log k$ versus $\log C$.

CTORS: 2422A

[illegible]

It is of the greatest importance to have a complete history of the well. Please state in detail the dates of reworking, together with the reasons for the work and its results. If there were any changes made in the casing, state fully, and if any casing was "struck" or left in the well, give its size and location. If the well has been dismantled, give date, size, position, and number of shots. If pigs or bridges were put in to test for water, state kind of material used, position, and results of pumping or bailing.
