The subject well was dually completed in the Pictured Cliffs and Mesa Verde zones and a packer was set at 6439 feet. The Gallup zone was tested through (MYXXXFC) a 3/4" choke for three hours June 20, 1958 with the following data obtained:  
(Date)

G	<del>SG</del>	SIRC	<u>1069</u>	psig; )	shut-in	<u>15</u>	days
G	<del>SG</del>	SIPT	<u>1277</u>	psig; )			
	NV	SIFT		psig;	shut-in		days

Time	( G ) Flowing Pressure	( G ) Working	
Minutes	Tubing Psig	Pressure, Psig	Temp ° F
	( ) SIP ( ) Psig

72

The choke volume for the Gallup was 1460 MCF/D with an AOF  
of 1585 MCF/D. (~~PCxxx~~ MW)

This test was conducted with the Gallup sleeve open to the 2" tubing and the Dakota sleeve closed, therefore the Dakota pressures could not be measured.
