**DETAILS OF WORK**

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On February 2, abandonment procedures were carried out on the Navajo Tribal #71. Perforations from 1532'-34" and 1536'-42" were squeezed to 500 psi with 25 sacks of neat cement and a plug was spotted opposite the perforations with 10 sacks of cement. Another plug was spotted from 1500'-1500" with 7 sacks. The broken head was cut off and a 20' plug was set in the casing at the surface. The location marker was installed with 1" pipe.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
