Well No. 52 (PM) is located 1240 ft. from N line and 900 ft. from E line of sec. 24

NE 1/4 Section 27 28N 7E N.M.P.M.
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)

G. BLANCO-PC (EXT) & BLANCO-MESA VERDE Hic Arriba New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

At present this well is completed to produce from the Mesa Verde formation only. It is intended to recomplete this well as a dual completion in the Pictured Cliffs and Mesa Verde formations in the following manner.

1. Pull tubing and set a temporary drillable bridge plug in the 5 1/2" casing above the Mesa Verde perforations.
2. The 5 1/2" casing will be cut off at the top of the cement that is between the 5 1/2" casing and the 7 5/8" casing and the upper portion of the 5 1/2" casing will be retrieved from the well.
3. The Pictured Cliffs formation will be perforated and fraced.
4. The temporary bridge plug between the Pictured Cliffs and the Mesa Verde formations will be drilled.
5. Two tubing strings will be run in the well with a permanent drillable completion packer isolating the two zones.

I understand that this plan of work and relative approval in writing by the Geological Survey before operations may be commenced.
