13. Describe Proposed or Completed Operations

It is intended to workover this Dakota well to repair a suspected csg failure across the Ojo Alamo, which damaged the existing Dakota perforations with water. The 2 3/8" tbg will be pulled and the existing perforations squeezed w/cmt below a cmt ret. The casing failure will then be squeezed w/cmt and an attempt made to circ cmt to surface out the bradenhead valve. Cmt will be drld out and the well cleaned out to COTD. The lower Dakota will be perforated 7892-7904' w/4 spf and fraced through a packer and tbg. The 2 3/8" tbg will be rerun in the well and the well returned to production.
