San Juan 28-7 Unit #54 N-22-28N-7W

Dear Mr. Jones:

Your request for retests on the referenced wells is hereby approved.

Please notify this office of the date that the work was completed on each well.

Sincerely,

A handwritten signature in dark ink, appearing to read "Frank T. Chavez".

San Juan 28-7 Unit #54  
N-22-28N-7W  
Rio Arriba County, New Mexico

Dear Sir:

This is to request a deliverability retest for the above referenced wells.

The #47 is a Mesaverde completion which had its biannual deliverability test in July, 1986. At that time the well flowed 339 MCFD and had a deliverability of 331 MCFD. Recently, a compressor was installed and flow has stabilized at approximately 700 MCFD. This new flowrate will result in a deliverability of approximately 550 MCFD.

The #54 is a Mesaverde completion that was exempt marginal in 1986. In August, 1984 this well tested at a flowrate of 70 MCFD for a deliverability of 156 MCFD. Recently, a plunger system was installed and flow has stabilized at approximately 200 MCFD. This new flowrate will result in a deliverability of approximately 250 MCFD.

We request that these retests be approved as soon as possible to prevent these wells from becoming overproduced. If you have any questions or need any additional information, please call Jim Ennis at (303) 740-2540.

Sincerely,

TENNECO OIL COMPANY

L. D. Jones
