13. Describe Proposed or Completed Operations

It is intended to perforate and fracture stimulate the the following intervals of the Mesa Verde group. These zones were bypassed during original completion and are all located below the Huerfanito Bentonite @ 4688'. The tubing will be pulled from the well. A bridge plug will be set @ 6550' above the Point Lookout. Selected intervals from 6347-6528' will be perforated and fracture stimulated through tubing and a packer. A bridge plug will be set @ 6314'. Selected intervals from 6192-6296' will be perforated and fracture stimulated. The bridge plugs will be retrieved from the well, the tubing will be run back in the well, and the will returned to production.
