Re: Communication Test, San Juan 28-5 Unit #33, L-17-28N-5W

Dear Mr. Cutler:

The annual packer-leakage test was conducted on the above well in June and July, 1968. This test seemed to indicate communication between the producing zones. A three hour test was conducted on September 24, 1968, and again on October 1, 1968. This retest confirmed that communication exists between the producing zones.

Will you please take immediate action to separate the zones in this well as required by the order authorizing the dual completion.

Yours very truly,

  
Emery C. Arnold  
Supervisor, District #3

Encl.
