NORTHWEST NEW MEXICO PACKER LEAKAGE TEST INSTRUCTIONS

- A packer leakage test shall be commenced on each multiply completed well within seven days after

 ... all completion of the well, and sexually thereafter as prescribed by the order authorizing the multiple

 materiae. Such tasks about a lake the commenced on all provide completions making any days of the days.
- mission. Such tests shall also be connected on all manuple completions within seven days following mission and/or chemical or fine-tests structment, and whenever sumetial work has been alone on a well during writen the seclar or the tables, have been disturbed. Tests shall also be taken at any time that communication is suspected or when requested by the Division.
- At least in loans prior to the commencement of any pacine leakage test, the operator shall notify the
 Division in we rag of the exact time the test is to be commenced. Offset operators shall also be so
 notified.
- 3. The packer analyze test shall commence when both zones of the dual completion are shat-in for pressure subdification, both zones shall remain shat-in until the water-rand pressure in each has subdifined, provided however, that they used not sensain shat-in more than seven cays.
- 4. For flow Test No. 1, can some of the dual completion abail be produced at the mercual sets of production while the other some remains shut-in. Such test shull be consisted for seven days if the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial pectur leakage test, a gas well in being flowed to are exametabase date to the lack of a pipeline commotion the flow period shull be three hours.
- Following completion or above fast No. 1, the well shall again be shat-in. in accordance with Paragraph 3 above.
- First Test No. 2 shall be consisted even though no leak was indicated during flow Test No. 1.
 Processure for Flow Test No. 2 is to be the same as for Flow Test No. 1

- except that the previously produced zone shall remain shat-in while the zone which was previously shat-ut is produced.
- 7. Pressums for gas-sons tosts must be measured on each zone with a deadweight pressure gauge at time intervals as follows: 3 hours tests: immediately prior to the beginning of each flow-period, at fifteen mustae intervals during the first hour thereof, and at hourly intervals thereafter, including one pressure measure—rst immediately prior to the flow period, at least one time during each flow period (at immediately prior to the conclusion of each flow period. Other pressures may be taken as desired, or may be requested on wells which have proviously shown questionable test date.
- 24-hour oil zone tests: all pressures, througnout the entire test, shall be continuously measured and recorded with recording pressure gauges the accuracy of which must be obsolved at least twice, or at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an eil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required above being taken on the gaz zone.
- 8. The menute of the above described tess shall be filed in tripticate within 15 days after completion of the test. Tests shall be filed with the Azecc District Office of an New Maxico Oil Conservation Division of Northwest New Maxico Pacies:

 Test form Revised 10/01/78 with all deadweight pressures indicated there as the flowing temperatures (gas zones only) and gravity and GOR (oil 2s)
