Dorothy,

I haven't forgotten about you or your inquiry on the 58A. This well is trimingled, MV/PC/CH. The MV was already producing. The well was then recompleted in the PC and tested and then the well was also completed in the Chacra and then commingled with the MV. The tubing landed depth does need to be corrected to 4794'. Would you like for us to submit an amended C104 for the Otero Chacra completion showing the correct landed depth?

Thanks,  
Yolanda
