13. Describe Proposed or Completed Operations

Revised

The cement design on this well is changed from a two-stage production job to a foamed cement job. it is planned to complete this well rigless; therefore, no stage tools can be used. The tail slurry will be the same as in the original Operations Plan as submitted: 100 sx Class "B" w2% calcium chloride and 0.25 pps cellophane flakes (15.6 ppg, 1.18 cu.ft./sx, 5.2 gal/sx).

The lead slurry will consist of: Class "B" cmt w/0.035 gal/sx foam stabilizer, 1.5% foaming agent, 2% calcium chloride and 0.25 pps cellophane flakes. This slurry will be foamed using 20,670 SCF of N2 to a 7.5 ppg weight. 431 sx of unfoamed slurry will be used (1119 cu.ft. of foamed slurry). This slurry should give a better bond strength than a Pozmix lead slurry.

Meridian Oil, as a prudent operator, recognizes the responsibility to test for cement job success. Any remedial work, if necessary, will be approved through the appropriate regulatory agency.

14. I hereby certify that the foregoing is true and correct.
