AZTEC, NEW MEXICO

December 6, 1962

*Standard Oil Company of Texas
Drawer "S"
Monahans, Texas*

Attn: Mr. J. L. Rowland, District Engineer

Dear Sir:

We have received the tabulation of deviation survey tests which were made on your #6 Jicarilla 4-26 well located in the Boulder-Mancos field in Rio Arriba County, New Mexico.

We have made a rough calculation and have found that the total deviation is 365'. As the well is located only 330 feet from the north boundary of the 40-acre tract upon which the well is located it is possible that the bottom of the hole is located off the producing tract. It is, therefore, necessary that we require that you furnish us with a directional survey from which the location of the bottom of the hole can be determined or in the alternative any other information which you may have which indicates the location of the bottom of the hole. We will not be able to assign an allowable until this information has been received.

Yours very truly

*Emery G. Arnold
Supervisor, District #3*
