October 21, 1957

Government Morgan
Well No. 1 is located 500 ft. from SW line and 500 ft. from E line of sec. 31

SE 1/4 Sec. 31 (Sec. and Sec. No.) 27N (Twp.) 15W (Range) 106N (Meridian)

undesignated (Field) San Juan (County or Subdivision) New Mexico (State or Territory)

The elevation of the derrick floor above sea level is 5043' KB
5032.75' GL

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

An 8-3/4" hole was drilled from 200' to 5045' KB. No cores or drill stem tests were taken. 5 1/2" J-55, 15.5# casing was cemented at 5044' with 100 sac of cement 80% Pozmix "B" plus 4% Gel and 1/8" per sac Floccle added. A temperature survey indicated top of cement at 4990'. A Volex Gamma Ray Neutron Log was run and the casing perforated from 4996' to 4999' and from 4935' to 4969' KB with 4 Dyna Jets per foot. The perforated interval was treated with a sand-oil frac as follows: Broke formation at 1900 PSI. Pumped in 70,000 gals crude mixed with 100,000 lbs of 20-40 mesh sand. Used 200 balls in 7 stages. Flushed with 53 bbls. Maximum pressure 2000 PSI. Minimum pressure 2300 PSI. Injection rate 55.5 bbls/min. Back flowed load oil for 5 days.
