The elevation of the derrick floor above sea level is 6154 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The well was spudded at 4:00 P.M., September 28, 1952. In September 28, 1952 8-5/8" casing was landed at 106 feet and cemented with 75 sacks of cement. Plug down at 10:50 P.M., September 28, 1952. At 11:00 P.M., September 29, 1952, casing and water shut-off were tested at 500 pounds for 30 minutes with no drop in pressure. Thirty-two feet of solid cement were drilled in bottom of pipe and water shut-off was again tested at 500 pounds for 30 minutes. There was no drop in pressure during this test and drilling operations were resumed.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
