17. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work) SEE RULE 1103.

Move in, rig up, pump in 100 bbls. fresh water down tbg. and kill well. Pull tbg., run casing inspection tool to T.D. and determine if casing is still in good condition throughout Dakota section. If good, run a Baker Model "D" packer w/7000# bump out plug on wire line and set @ 10 to 20' above top perforation in well. Run tbg. back with Baker Model "D" mandrell and enough integral 1-1/4" tubing open-ended below mandrell to open packer and hang to bottom casing perforation when mandrell is set. With tubing above Model "D", pump in approximately 120 bbls. low grade crude, mixed with Ken-Pack; completely fill annulus and pump same out holes in casing. Displace 20 to 24 bbls. fresh water down tubing, slack tubing off, open packer, set tubing down, run swab.

Return well to production.

18. I hereby certify that the information above is true and complete to the best of my knowledge and belief.
