DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

To drill and test subject well to the Pictured Cliffs Formation. Surface Casing: 8-5/8" 24# casing to be set at approximately 100' KB and cemented to surface. Production Casing: 4-1/2" 9.50# J-55 casing to 1985'. Use centralizers and scratchers through the Pictured Cliffs Sand. Cement with 100 sacks neat cement with 2% Sol. No casing or testing planned. Logging: Combination ES-Induction Log from TB to surface casing. Detail ES-Induction Log and Microlog-Caliper through Pictured Cliffs. Run Gamma Ray Collar Log in conjunction with perforating. Drilling Time: Geologist from 100' to TB. Drift Surveys: At 50' intervals to 100'; thereafter at 250' intervals. Standard Depth Measurements: SLM of drill pipe at approximately 200' above the Pictured Cliffs. Samples: Collect 10' samples from surface to TB. **NOTE:** Location 990' P.M. and 990' P.M. would have fallen in canyon, making location virtually impossible to build.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
