DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; include grouting jobs, cementing points, and all other important proposed work)

It is proposed to P & A this well as follows:

To run tubing to bottom and circulate cement to approx 200' in casing. Check after set.

To pump approx 25 sacks down 5" and some amount down between production and surface casing.

To place marker and clean up location.

This well has poor casing-cannot be recovered and new well is being drilled.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
