Attn: Mr. G. W. Coombes
Division Production Superintendent

Dear Mr. Coombes:

We have your letter of June 22, 1965 inquiring about the necessity for bradenhead testing for your Government Newman #1 well.

This well is located in Section 27-27N-13W, San Juan County, and is outside the area where we are requiring tests this year. It will, therefore, not be necessary that you test this well until further advised.

Yours very truly

Emery C. Arnold
Supervisor, District #3

1. The first step in the process of identifying a problem is to define the problem. This involves identifying the symptoms of the problem and determining the scope of the problem. Once the problem has been defined, the next step is to identify the causes of the problem. This involves identifying the factors that are contributing to the problem and determining the underlying causes. Once the causes have been identified, the next step is to develop a plan of action. This involves identifying the steps that need to be taken to solve the problem and determining the resources that will be needed to implement the plan. Finally, the last step in the process is to implement the plan and monitor the results. This involves putting the plan into action and tracking the progress of the solution. Once the problem has been solved, the final step is to evaluate the results and determine if the solution was effective. This involves comparing the results of the solution to the original problem and determining if the problem has been solved. If the problem has not been solved, the process may need to be repeated.
