**DETAILS OF WORK**

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed to set 200' of 8 5/8" surface casing and cement same back to the surface. It is then proposed to drill 7 7/8" hole to approximately 6200'; running 5 1/2" casing therein to test the Dakota if showings warrant; cementing said casing with not less than 200 sac; then perforating for production. Top of Dakota expected about 6100'.

E. log will be submitted before running 5 1/2" casing so that it may be determined if the Pictured Cliffs requires special stage cementing.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
