Artesia, N. M. March 20, 1958

Well No. 1 is located 1880 ft. from N line and 660 ft. from W line of sec. 27  
1/4 Sec. 27 27 N 12 W MAP  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
ildest San Juan New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 5840 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

We drilled the above well to Total Depth 6125'. Ran Schlumberger Electrical log to Total Depth. In accordance with our Mr. Fred Crum's conversation with your district office in Farmington, we plugged this well in the following manner:  
Set a 46 sack cement plug at 5850-6000', a 31 sack cement plug at 4025-4125', a 46 sack cement plug at 2050-2200', a 46 sack plug from 1200-1350', a 43 sack plug from 120-260, and set one ten foot piece of 4" line pipe extending 4 feet above ground surface in top of surface casing with 15 sacks cement. Filled pits and leveled location. Plugging work completed on January 29, 1958, and location leveled and pits filled on March 18, 1958.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
