*Re: R & G #42 Marron  
SW<sup>1</sup>/<sub>4</sub> Section 22-27N-3W*

*Gentlemen:*

*Supplement #6017, dated February 6, 1961 cancelled the allowable for the Mesaverde side of the above dually completed well. The well's allowable was cancelled for the reason that the operator has failed to comply with the terms of DC Order 858 which authorized the dual completion of this well in the Mesaverde and Dakota zones. The well is in non-compliance for the reason that packer leakage test for the year 1960 has not been received in this office.*

*You are hereby put on notice that unless packer leakage test has been filed in this office within the next 30 days showing that the zones in this well are segregated, DC Order 858 will be voided and you will be instructed to re-enter the well and complete it as a single zone completion in one formation or the other.*

*Yours very truly,*

*Emery C. Arnold  
Supervisor, District #3*
