Re: R & G Drilling Co. #42 Marren  
N-22-27N-3W

Gentlemen:

We are reinstating the allowable for the Blanco Mesaverde side of the above well effective September 13, 1961. A supplement is being issued to all interested parties.

It is our understanding that the well will immediately be scheduled for a packer leakage test which will consist of flowing the Mesaverde Formation into the pipeline for a period of seven days and recording Dakota tubing pressure at the beginning, at the mid-point and at the end of the flow week. This test will supplement the packer leakage test which you have already submitted.

Yours very truly

EMC:ks
