The elevation of the derrick floor above sea level is 6,240 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

After drilling to 2,293' - set 58 joints (2295') of 5-1/2" OD 15.5# casing at 2,293' with 100 sacks cement on September 22, 1956, and moved off.

Oct. 8, 1956. Perforated from 2175' to 2197' with 4 holes per foot. On Oct. 9, 1956 sand fraced through perforations with 17,500 gallons water and 30,000# sand. Flushed with 3,500 gallons water. Breakdown pressure 3100#. Treating pressure 1500#. Injection 35.2 barrels per minute.

Oct. 11, 1956. Ran 102 joints (2205') of 1" tubing - landed at 2,213' RKB. Shut well in for potential test and to await pipe line connection.

Casing tested by pressuring up to 1,000# - pressure held for 1.00 hr

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
