Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)* The well has a cement retainer set just above the perforations. On February 2, 1994, we ran a pressure test on the well casing. We used 16 bbl. of water to fill the casing and pressured up to about 290 PSIG, which is about 50% above the shut-in pressure of the well. It held this pressure for fifteen minutes and indicates to us that the casing is intact. A copy of the test chart is attached. Our plans are to determine the best method of re-working the well to return it to production, and to attempt the re-work next summer. Since the well casing is intact, we request that the April 30, 1994 deadline for re-working or plugging the well be removed. CH FOR BALL
