DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well was originally completed in April 1953, and subsequently recompleted in September, 1953. However, initial potential tests showed the well to be non-commercial, and the well was disconnected from pipeline system in February, 1955. No remedial or abandonment actions have been taken since. As the well will produce a small immeasurable quantity of gas when opened to the atmosphere, it is intended to shut the well in and temporarily abandon it until it is decided to either plug and abandon or workover the well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
