New Mexico
(State or Territory)

The elevation of the derrick floor above sea level is **6,393** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Spudded well on July 11, 1960 - 4:00 P.M.

July 12, 1960 - after drilling to 325 feet, set 10 joints (309') of 8-5/8" OD 24# J-55 casing at 322' with 250 sacks regular cement, 2% calcium chloride. Cement circulated to surface.

Will continue drilling after cement has set.

NOTE: On Notice of intention to drill this well, it was designated as Turner-McAdams No. 2. Subsequent investigation revealed a previous well had been so designated - hence designation of this one has been corrected to: Turner-McAdams No. 2-20, and it will be so known. I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Company **J. Glenn Turner and William G. Webb**

Address **Box 728**

Farmington, New Mexico.
