The elevation of the derrick floor above sea level is 6000 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is intended to clean out the open hole and deepen the well approximately 80' to 2078'. A 4 1/2" flush joint liner will be set and cemented with 50 sacks. Pictured Cliffs pay will be perforated and sand-water fractured. The well will be cleaned out and the 1" line pipe siphon string will be re-run.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
