The elevation of the derrick floor above sea level is _____ ft. (to be reported later)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill the above well to approximately 2100' with standard rotary tools to test the pictured Miocene Formation. The following casing program is proposed:

Size	Depth	Cement	Remarks
17-3/4"	100'	85 sacks	175% of calculated amount to circulate
5-1/2"	1975'	75 sacks	100% of calculated amount to fill 600' above shoe.

Copies of the location plat are attached and copies of all logs and surveys will be submitted to your office upon completion of the well.

The production string will be set at top of the pay, the pay shot with 180 and the hole cleaned out with cable tools.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Company Standard Oil and Gas Company

Address Box 487
Farmington, New Mexico

By W. O. Green

Title Production Foreman

Company Harold Oil & Gas Company

Lease Eva E. Martin "C" Well No. 1

Sec. 14 T. 27 N., R. 10 W., N.M.P.M.

Location 330' from the North line and 1400' from the East line.

San Juan County

New Mexico

Scale—4 inches equals 1 mile.

This is to certify that the above plat was prepared from field notes of actual surveys made by me or under my supervision and that the same are true and correct to the best of my knowledge and belief.
