Date Surveyed February 6, 1956  
Garnett V. Eads  
Registered Land Surveyor

OIL CONCENTRATION OF EXHUSTION  
AIR IN PPM BY VOLUME

As a result, the model is able to capture the nonlinear relationship between the variables and the response variable, and the model is able to capture the nonlinear relationship between the variables and the response variable.

4

Figure 1. The effect of the concentration of the polymer on the surface energy of the polymer-coated glass slides. The surface energy of the polymer-coated glass slides was measured by the contact angle of water. The surface energy of the polymer-coated glass slides was measured by the contact angle of water. The surface energy of the polymer-coated glass slides was measured by the contact angle of water.

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.
