## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

**MIRIOTA** Rigged up Dowell and pumped 80 BW, 15 Casing down tubing to kill Dakota. Pumped 120 BW, 15 Casing down tubing and casing to kill Gallup. Set Otis plug at 6773' KB in Dakota tubing. Pressured to 2200 psi, leaked off to 2200 psi in 1 1/2 hours. Rigged up and pulled Dakota and Gallup tubing. Repaired Baker seal assembly and ran 199 joints 2-1/16" Auger tubing in Dakota, landed at 6773.02' KB. Swabbed Dakota in and flowed for 4 hours. Annulus had no pressure or vacuum after flow period, indicating that communication between Gallup and Dakota no longer exists. Gallup is temporarily abandoned.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
