DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

In our Notice of Intention to Drill, we included shooting with liquid nitro as a part of our intended program. On drilling into the Pictured Cliffs sandstone, we found that the sand was extremely friable and decided it might be best not to shoot. Also, we recovered a natural gas of 1,860 MCFTD which was better than previous wells after they had been shot.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
