Well No. 1 is located 660 ft. from [N] line and 1980 ft. from [E] line of sec. 8  
NE 1/4 Sec. 8 27N 13W N.M.P.M.  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
Wildcat San Juan New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 5956 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding, etc., casing points, and all other important proposed work)

We propose to drill 12 1/2" hole to 250' and set 9 5/8" surface casing with 50 sacks of cement. We will then drill 7 7/8" hole to top of Gallup formation at approximately 5100 feet. We plan to run one drill stem test from 1330' to 1345' in Pictured Cliffs gas sand. We will core and test the Gallup from 5100' to 5500'. If productive, we will cement 5 1/2" casing and complete. If barren, we will drill to 6400' and test Dakota formation.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
