Well No. 1 is located 660 ft. from N line and 1980 ft. from E line of sec. 8

NM-1-Sec. 8 27E 13W N. M. P. M.
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Wildcat San Juan New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 5956 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to deepen the present well by 800 feet by drilling a 4 1/4" hole through the present 5 1/2" casing. We will drill stem test and log the Dakota sand. If warranted, we will set 3" casing and cement with 150 sacks of cement. We will then perforate and frac the Dakota and produce through 2" tubing. The perforations in the Gallup sand at 5418-5438' will be squeezed with 100 sacks of cement. At the completion of the Dakota test we propose to reperforate and refrac the Gallup section and make a dual completion if feasible.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
