DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Spudded 12-1/4" hole on January 2, 1961 and drilled to 392'. Set 8-5/8" casing at 392' with 250 sacks cement containing 2 percent calcium chloride. Circulated 30 sacks cement. After waiting on cement tested 8-5/8" casing with 500 psi for 15 minutes which held with no indication of pressure drop. Reduced hole to 7-7/8" at 392' and resumed drilling operations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
