DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate muddling jobs, cementing points, and all other important proposed work)

Rotary tools were used from the surface to a total depth of 1601' where 1601' of 5 1/2" casing was cemented with 100 sacks. The plug was pumped down and tested for 2 hours with no drop in pressure.

Cable tools were removed on 8-23-51, the hole bailed dry, and the plug drilled and tested for 2 hours, and it was found that the hole was dry and that a satisfactory cement job was had. The hole was drilled to a total depth of 1702', and the well showed an estimated one million cubic feet of gas at 1616', at which point the hole was loaded with water.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
