actual complet multiple comp following reco done on a well	tion of the well, and annual detion. Such tests shall also empletion and/or chemical of during which the packer of	need on each multiply compi ly thereafter as prescribed by o be connected on all multipl or frac-ture treatment, and w	e completions within seven of henever remedial work has be bed. Tests shall also be tain	after except that the previously shut was previously shut fays 7. Pressures for ga- seen pressure gauge at tip	iously produced zone shall remain shut-in while the zone which		

- the Division in writing of the exact time the test is to be commenced. Offset operators shall also be so
- he Division in writing of the exact time the test is to be commenced. Other hours,

 The packer leakage test shall commence when both zones of the dual completion are shas-in for pressure stabilization, both zones shall remain shas-in until the well-head pressure in each has stabilized, provided however, that they need not remain shas-in more than seven days.

 For flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shas-in. Such test shall be continued for seven days if the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to the lack of a pipeline connection the flow period shall be included by the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to the lack of a pipeline connection the flow period shall be required and recorded with recording pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures are required above being taken on the gaz zone.

 The transphere due to the lack of a pipeline connection the flow period shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztree District Office of the New Mexico Oil Conservation Division of Northwest New Mexico Packer. pas well is being nowes so use the better bours.

 5. Following completion of flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.

 6. Flow Test No. 2 shall be conducted even though no leak was indicated during flow Test No. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1
- ed during flow Test No. 1.
- immediately prior to the flow period, at least one time during each flow period (at approximately the midway point) and immediately prior to the conclusion of each flow period. Other pressures may be talzen as desired, or may be requested on wells which have previously shown questionable test data.

 24-hour oil zone tests: all pressures, throughout the entire test, shall be
- the New Mexico Oil Conservation Division of Northwest New Mexico Packer
 Leakage Test from Revised 10/01/78 with all deadweight pressures indicated
 thereon as well as the flowing temperatures (gas zones only) and gravity and GOR
