DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On March 31, 1951:

Shot well with 2360 quarts of solidified nitro from 4000' to 4737' T. D.
 Before shot gage was 50 MCF/D.
 After shot gage was 3,500 MCF/D (1 hour).
 Cleaning out and prep to run tubing.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
