NORTHWEST NEW MEXICO PACKER-LEAKAGE TEST

Operator bp America Production Company 200 Energy Ct, Farmington Lease Name Riddle F LS Well No 3

Location of Well: Unit Letter A Sec 20 Twp 28 N Rge 8 W API # 30-045-07331

	NAME OF RESERVOIR OR POOL	TYPE OF PROD. (Oil or Gas)	METHOD OF PROD. (Flow or Art. Lift)	PROD.MEDIUM (Tbg. or Csg.)
Upper Completion	S Blanco PC	GAS	FLOW	TBG
Lower Completion	Blanco MV	GAS	FLOW	TBG

PRE-FLOW SHUT-IN PRESSURE DATA

	Hour, date shut-in	Length of time shut-in	SI press. Psig	Stabilized? (Yes or No)
Upper Completion	6/25/02	72 HOURS	197	YES
Lower Completion	6/25/02	72 HOURS	295	YES

FLOW TEST NO. 1

Commenced at (hour, date)* Zone producing (Upper or Lower):

TIME (hour,date)	LAPSED TIME SINCE*	PRESSURE		PROD. ZONE TEMP.	REMARKS
		Upper Completion	Lower Completion		
6 / 25	DAY 1	192	286		BOTH ZONES SHUT IN
6 / 26	DAY 2	195	291		BOTH ZONES SHUT IN
6 / 27	DAY 3	197	295		BOTH ZONES SHUT IN
6 / 28	DAY 4	197	263		FLOW Lower ZONE
6 / 29	DAY 5	197	192		FLOW " ZONE
6 / 30	DAY 6	197	155		FLOW " ZONE

Production rate during test

Oil:_____ BOPD based on_____Bbls. in_____Hours_____Grav._____GOR_____

Gas:_____MCFPD; Tested thru (Orifice or Meter):_____

MID-TEST SHUT-IN PRESSURE DATA

	Hour, date shut-in	Length of time shut-in	SI press psig	Stabilized? (Yes or No)
Upper Completion				
Lower Completion	Hour, date shut-in	Length of time shut-in	SI press. psig	Stabilized? (Yes or No)

(Continue on reverse side)

NORTHWEST NEW MEXICO PACKER-LEAKAGE TEST

FLOW TEST NO. 2

Commenced at (hour, date)**				Zone producing (Upper or Lowr):	
TIME (hour,date)	LAPSED TIME Since**	PRESSURE Upper Completion	PRESSURE Lower Completion	PROD. ZONE	REMARKS

Production rate during test

Oil:_____BOPD based on_____Bbls. in_____Hours._____Grav._____GOR_____
Gas:_____MCFPD:Tested thru (Orfice or Meter):_____

Remarks:_____

I hereby certify that the information herein contained is true and complete to the bes of my knowledge.

Approved JUL - 8 2002 19__ Operator Amoco Production Company New Mexico Oil Conservation Division

By ORIGINAL SIGNED BY CHARLIE T. PERRIN By Sheri Bradshaw

Title DEPUTY OIL & GAS INSPECTOR, DIST. #3 Title Field Tech

Date 7/3/02

NORTHWEST NEW MEXICO PACKER LEAKAGE TEST INSTRUCTIONS

1. A packer leakage test shall be commenced on each multiply completed well within seven days after actual completion of the well, and annually thereafter as prescribed by the order authorizing the multiple completion. Such tests shall also be commenced on all multiple completions within seven days following recompletion and/or chemical or fracture treatment, and whenever remedial work has been done on a well during which the packer or the tubing have been disturbed. Tests shall also be taken at any time that communication is suspected or when requested by the Division.

2. At least 72 hours prior to the commencement of any packer leakage test, the operator shall notify the Division in writing of the exact time the test is to be commenced. Offset operators shall also be so notified.

3. The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided however, that they need not remain shut-in more than seven days.

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial
packer leakage test, a gas well is being flowed to the atmosphere due to the lack of a pipeline connection the flow period shall be three hours.

5. Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.

6. Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1. Procedure for Flow Test no. 2 is to be the same as for Flow Test No. 1 except that the previously produced zone shall remain shut-in while the zone which v previously shut-in is produced.

7. Pressures for gas-zone tests must be measured on each zone with a deadwei pressure gauge at time intervals as follows: 3 hours tests: immediately prior to beginning of each flow-period, at fifteen-minute intervals during the first hour there and at hourly intervals thereafter, including one pressure measurement immediat prior to the beginning of each flow period, at least one time during each flow per (at approximately the midway point) and immediately prior to the conclusion of ea flow period. Other pressures may be taken as desired, or may be requested wells which have previously shown questionable test date.

24-hour oil zone tests: all pressures, throughout the entire test, shall continuously measured and recorded with recording pressure gauges the accura of which must be checked at least twice, once at the beginning and once at the e of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-g dual completion, the recording gauge shall be required on the oil zone only, w deadweight pressures as required above being taken on the gas zone.

8. The result s of the above-described tests shall be filed in triplicate within 15 da after completion of the test. Tests shall be filed with the Aztec District Office of t New Mexico oil Conservation Division on northwest new Mexico packer leakage Te Form Revised 11-16-98 with all deadweight pressures indicated thereon as well the flowing temperatures (gas zones only) and gravity and GOR (oil zones only)
