

NEW MEXICO OIL CONSERVATION COMMISSION

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were grown in the YEA medium for 24 h at 28°C. The cell concentration of the strains was adjusted to 10⁸ cells/ml. The cell suspension was mixed with the plant tissue and incubated for 24 h at 28°C. The plant tissue was then cultured on the selective medium. The transformation efficiency was determined as the number of transformants per 100 mg of plant tissue. The data were the mean of three independent experiments.

Figure 1 illustrates the experimental setup. A participant is seated at a table, looking at a screen. The screen displays a 3D model of a hand and a 2D image of a target. The participant is instructed to move the hand to the target. The diagram includes labels for the participant, the screen, the hand, and the target.
