The elevation of the derrick floor above sea level is 6267 ft. (G.I.)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Well was drilled to a total depth of 2230 feet with rotary tools. Cable tools moved on location and cleaned out to bottom.

Well was plugged back with pea gravel from 2230 feet to 2190 feet and shot with 515 quarts SMC from 2190 feet to 2123 feet, with 5 feet gravel trap on top of shot and Cal-seal cap from 2118 feet to 2080 feet, on August 11, 1951. Well was cleaned out to total depth. 1" tubing was landed at 2172 feet.

Well was shut in 72 hours. Shut in casing pressure was 465 psi. Well measured 487 MCF/day after 3 hours blow down through siphon string with pilot tube through 2" nipple on September 3, 1951.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
