RE: Shut-in Wells

Dear Sir:

At the present time Nassau Resources, Inc. is trying to produce the following shut-in wells:

A-34-27-8 Hammond #1 and Hammond #2 - *P-34-27-8* Compressor furnished by Atomi

If these wells will produce through a compressor they will be restored to production. If not, Nassau will explore other options (P & A, sale, and etc.).

The following wells will be tested in July as soon as the compressor on the Hammonds is available:

A-11-27-8 - Oxnard #1 and Oxnard #2 - *P-11-27-8*

We are now trying to produce the Nassau #7 well. If pumper cannot sustain production we plan to swab the well in, and again try to produce the well.

Sincerely,

Murphy Brasuel
Murphy Brasuel

mb/cm

THIS APPROVAL EXPIRES *SEP 01 1993*

Once the testing is completed on the above wells, submit a Sundry Notice for each well explaining the status of the well. (Return to production, procedure to P&A or etc.)
