Re: Eastern Petroleum Company  
No. 3 Table Mesa  
Unorthodox location  
2100 FwL, 1290 FSL  
Sec. 3, T27N, R17W

Gentlemen:

The proposed location of Eastern Petroleum Company's No. 3 Table Mesa well is an unorthodox location. It is less than 330 feet from a legal internal subdivision line. An exception is requested because Table Mesa is an old shallow oil field in the extreme mature stage of production. (Discovery year, 1925)

Referring to the enclosed map, the location is in the center of a group of abandoned wells. It is desired to locate this test in the most optimum spot to recover any attic oil remaining in the top of the structure. The proposed location is close to the center of a 3200 acre lease block, again refer to the enclosed plat. Because of this no adjacent lease holder's correlative rights will be violated.

It is really a matter of conservation and utilization of a natural resource since this oil would be lost if not drilled in the presently optimum indicated location.

It is requested that this proposed location be granted.

Very truly yours,

*Robert E. Lauth*
