13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

It is proposed to change this well to long term shut-in status.
A well has been drilled to produce the Fruitland Coal in this spacing unit, so this well cannot be completed in the Fruitland Coal.
This well has the potential for production in the Pictured Cliffs in zones at 1116'- 1120' and 1134'- 1140'. Present economics do not justify recompletion work.

It is requested this well be placed on long term shut-in status for the following reasons:

1. The well is currently unable to buck line pressure.
2. The well is unable to produce in paying quantities under current market conditions.
3. The well has additional reserves and has the potential to produce again if market conditions change so recompletion can be justified.
