		NAME OF STREET				
			1EXICO PACKER LEA	KAGE TEST INSTRUCTIONS		
A backet letkage test shall be commenced on each multiply completed well within wen days after actual completion of the well, and annually the eafter as prescribed by the				that the previously produced zone shall remain shut-in while the zone which was previously shut-in-s produced.		
det authorizing the multiple	e completion. Such tests shall al	sube commenced on all			must be manufactor as the control in the state of the	
uitiple completions within seven days feilowing recompletion and or chemical or fracture eatment, and whenever remedial work has been done on a well during which the packer or e tubing have been disturbed. Tests shall also be taken at any time that communication is				7. Pressures for gas-zone tests must be measured or, each zone with a deadweight pressure gauge at time intervals as follows: 3 hours tests: immediately prior to the beginning of each, low period, at fifteen-minute intervals during the first hour thereof, and at hourly.		
spected or when requested	by the Division	ij onse that communication is		intervals thereafter, including on	e pressure measurement immediately proor to the conclusion	
At least 72 hours prior to the commencement of any packer leakage test, the operator all rotally the Daysson in writing of the exact time the test is table commenced. Offset				of each flow period. 7-day tests, immediately prior to the beginning of each flow period, at least one time during each flow period (at approximately the midway point) and immediately prior to the conclusion of each flow period. Other pressures may be taken as desired, or

- 3. The packer leakage lest shall commence when both zones of the dual completion are shart-in for pressure stabilization. Both zones shall remain shut-in antil the well-head pressure in each has stabilized, provided however, that they need not remain shut-in more than seven days.
- 4. For Fow Test No.1, the zone of the dual completion shall be produced at the normal rate of production while the other zone tentains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note if on an initial picker leakage test, a gas well is being flowed to the citrosphere due to lack of a pipeline connection the thousier od shall be three hours.
- $\delta=1$ olk wing completion of flow. Fest No. 1, the weil shall a rain be shut-in in accordance with Paragraph 3 above
- 6. Flow Test No. 2 shall be conducted even though no walk vias indicated during Low Test No. 1. Procedure to Flow Test No. 2 is to be the same as for Flow Test No. 1 except

24-hour oil zone tests all pressures throughout the entire test, shall be continuou measured and recorded with recording pressure gauges the accuracy of which must be checked at least twice once at the beginning and once at the end of each test, with a deadwight pressure gauge. If a well is a gas-oil or at oil-gas data competion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required above being taken on the gas zone.

8 The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aziec District Office of the New Mexico Ol. Conservation Division on Northwest New Mexico Packer Leakage. Lest Form Revised 16-61-75 with all deadweight pressures indicated there in as well as the flowing temperatures (gas zones only) and gravity and GOR (oll zones only).
