December 20, 1958

Well No. 4 is located 980 ft. from N line and 1240 ft. from E line of sec. 25

S E 25 (1/4 Sec. and Sec. No.) 27E (Twp.) 8W (Range) NMPM (Meridian)  
So. Blanco-PC (Field) San Juan (County or Subdivision) New Mexico (State or Territory)

The elevation of the derrick floor above sea level is \_\_\_\_\_ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Operator proposes to plug and abandon as follows:

To run 2" to bottom and circulate cement in open hole and up into casing approx 200'. To let set and check for fillup. To pump cement down casing and squeeze through split or hole into water sand. To pump cement down annular space between production string and surface of casing and squeeze. Place cement plug at surface of casing, place marker and clean up location.

This well developed a leak in the 7" casing, causing water to enter the hole from a water sand about 500' deep. This casing is in bad condition and not practicable to repair.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
