PERFORTAIONS: 3762' - 90', 3948' - 56' w/ 1 shot/2 ft.

STIMULATION: 40,000# 10/20 sand in water.

PRODUCTION HISTORY: Well incapable of production, never first delivered. Swabbed a total of 27 days, TSTM. Unloaded well w/ compressor, no gas. Set BP @ 3850'(above bottom set of perfs). Attempted to produce well, no gas. No activity since 1980.

WORKOVER PROCEDURE

- 1. TA well (see attached procedure).
- 2. P & A well (see attached procedure)

file a#3data

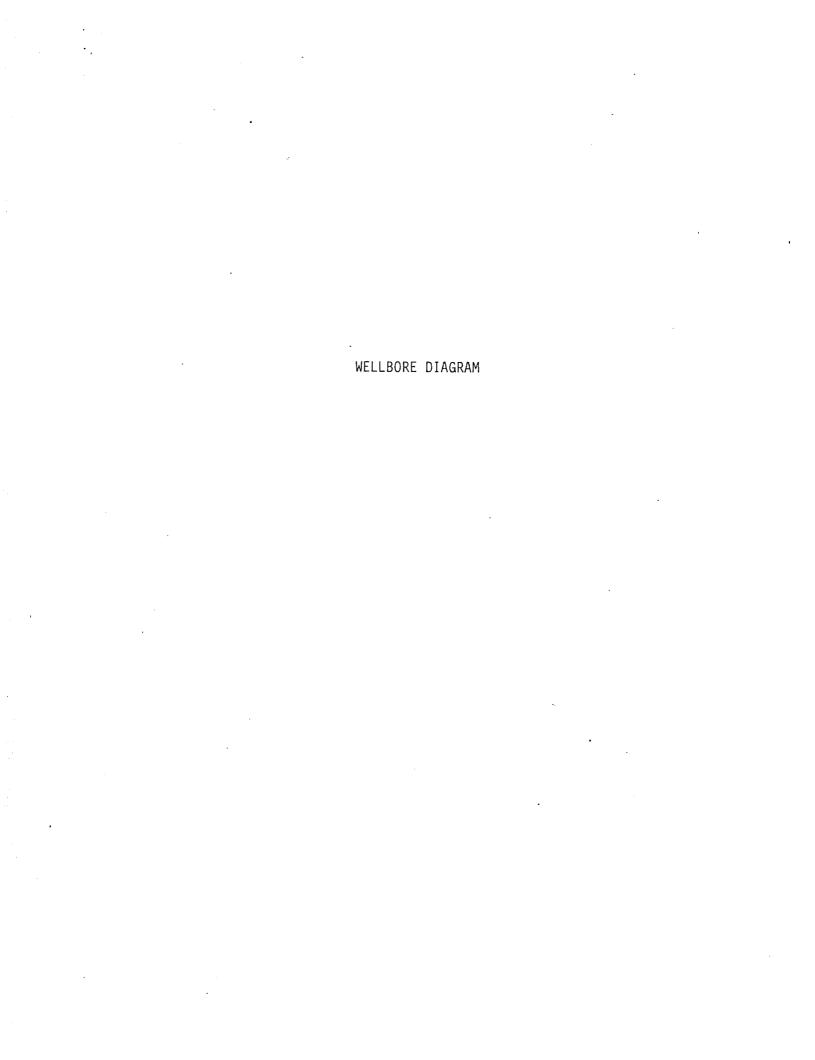

INDIAN A #3 PC P&A PROCUDURE

- 1. Set anchors, blade location and dig blow pit.
- 2. MOL RU Service Unit.
- 3. Hold safety meeting and discuss procedure.
- 4. Kill tubing and ND wellhead and NU BOF's.
- 5. Kill casing, pull tubing hanger and TOH.
- 6. Squeeze perforations with 25 sx. class "B" cement and spot 102 sx of cement from the top perforation to 50' below surface casing shoe.
- 7. Perforate 50' below surface casing shoe and squeeze with class "B" cement to surface. Spot 5 sx. (5.9 cu.ft.) class "B" cement in 2-7/8" casing to surface.
- 8. Cut off wellhead, install F&A marker, clean up location and seed to land owner's specifications.

Attachment to Notice of

Re: Permanent Abandonment

Intention to Abandon

Well: 3 Indran A

CONDITIONS OF APPROVAL

- 1. Plugging operations authorized are subject to the attached "General Requirements for Permanent Abandonment of Wells on Federal Leases."
- 2. Mark Kelly with the Farmington Office is to be notified at least 24 hours before the plugging operations commence (505) 326-6201.
- 3. Blowout prevention equipment is required.
- 4. The following modifications to your plugging program are to be made (when applicable):

Office Hours: 7:45 a.m. to 4:30 p.m.

GENERAL REQUIREMENTS FOR

PERMANENT ABANDONMENT OF WELLS ON FEDERAL AND INDIAN LEASES. WELLS ON FEDERAL AND INDIAN LEASES. WELLS ON FEDERAL AND INDIAN LEASES. WELLS ON FEDERAL AND INDIAN LEASES.

- 1. Secure prior approval either on a Sundry Notice (Form 1(60-1) or verbally from the Fluids Drilling & Production Section at this office before changing the approved plugging program.
 - and a calibrated tank to assure proper displacement of plugs. The Operator is responsible for providing all measuring devices needed to assure proper measure proper.
 - 3. A proper tank or pit will be used to contain all fluids pumped from the well during plugging operations. Unattended pits are to be fenced.
 - be a minimum of 100 feet in length with 50% excess inside casing or 100% excess when plug is set in open hole or squeezed into perforations. 15.6#/gal slurry weight is to be used when using class B neat cement or when CaCl2 is used. Use the recommended slurry weight of other type cements when they are used (Class C, Pozzolan etc.).
 - be taking fluid, (i.e. across perfs-unless bridge plug or retainer is used, across bad csg., or fresh water formations) will be tagged (touched) after cement has set to verify proper location.
 - 5a. Testing: The first plug below the surface plug shall generally be tested by either tagging the plug with the working pipe string, or pressuring to a minimum pump (surface) pressure of 1000 psig, with no more than a 10 percent drop during a 15 minute period (cased hole only). If the integrity of any other plug is questioned, it must be tested in the same manner. Also, any cement plug which is the only isolating medium for a fresh water interval or a zone containing a valuable mineral deposit should be tested by tagging with the drill string.
 - 6. Mud must be placed between plugs. Plugging mud is to be made up with a minimum of 15 lbs/bbl of sodium bentonite, and a nonfermenting polymer.

 Minimum consistency of plugging mud must be 9 lbs/gal and with a minimum viscosity of 50 sec/qt. Fresh water is to be utilized for mixing mud.
 - 7. Following the placement of a cement plug, the withdrawl rate for at least the length of the cement plug shall not exceed 30 ft/min, in order to minimize the contamination of the plug.

- 8. Within 30 days after plugging work is completed, file a Sundry Notice (Subsequent Report of Abandonment, Form 3160-5), in quintuplicate with Area Manager, Bureau of Land Management, 1235 La Plata Highway, Farmington, NM 87401. The report should give in detail the manner in which the plugging work was carried out, the extent (by depths) of cement plugs placed, and the size and location (by depths) of casing left in the well. Show date well was:
- 9. All permanently abandoned wells are to be marked with a regulation marker (4" pipe extending 4' above the ground line) containing the information as specified in 43 CFR 3162.6(d). Unless otherwise approved.
- 10. After plugging work is completed the surface is to be rehabilitated in accord with instructions from the Fluids Surface Management Section of the Farmington Resource Area Office.

All above are minimum requirements. The period of liability under the bond of record will not be terminated until the lease is inspected and surface work approved.

Please advise this office when the well location is ready for final inspection.

Failure to comply with the above conditions of approval may result in an assessment for noncompliance and/or a Shut in Order being issued pursuant to:43 CFR 3163.1.

You are further advised that any instructions, orders or decisions issued by the Bureau of Land Management are subject to administrative review pursuant to 43 CFR 3165.3 and appeal pursuant to 43 CFR 3165.4 and 43 CFR 4.700.
