DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Spudded 11" hole on July 7, 1960 and drilled to 211'. Set 8-5/8" casing at 211' with 115 sacks neat cement containing 2% calcium chloride. Circulated 10 sacks of cement. After waiting on cement tested 8-5/8" casing with 400 psi for 30 minutes which held with no indication of pressure drop. Reduced hole to 7-7/8" at 211' and resumed drilling operations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
