(Meridian)

Basin Dakota

San Juan

New Mexico

(Field)

(County or Subdivision)

(State or Territory)

The elevation of the derrick floor above sea level is **6047** ft. **(RDB)**

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Spudded 12-1/4" hole on April 14, 1961, and drilled to 266'. Set 8-5/8" casing at 266' with 200 sacks cement containing 2 percent Calcium Chloride. Circulated 20 sacks of cement. Waited on cement for 12 hours. After waiting on cement, tested 8-5/8" casing with 800 psi for 30 minutes, which held with no indication of pressure drop. Reduced hole at 266' to 7-7/8" and resumed drilling operations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
