The elevation of the derrick floor above sea level is **5980** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

As a result of the above well ceasing to produce, we propose to plug and abandon it as follows:

- 1.) Rig up unit and pull tubing.
- 2.) Pump 30 sacks cement down 6 5/8" casing to cement open hole section from 1771 - 1815.
- 3.) Fill hole with liquid.
- 4.) Pump 12 sacks cement down 9 5/8" - 6 5/8" annulus.
- 5.) Cut off well head.
- 6.) Erect abandonment marker and spot 5 sacks cement surface plug and clean up location.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
