Re: R & G #26 R & G,
A-27-28N-11W

Att: Mr. Wm. C. Russell

Dear Mr. Russell:

As you know the above well was recently completed by your Company as a Dual Completion in the Pictured Cliffs and Fruitland formations.

On October 9, 1956 a Commission representative witnessed a packer leakage test conducted on this well. The test indicated that there is communication between the tubing and casing and therefore that the producing zones are not separated. Under provisions of our dual completion orders we are therefore directing that you take immediate action to separate the two zones in this well.

Yours very truly

Emery C. Arnold
Supervisor, District #3
